PROJECTS

07/2020 - 09/2020

El-Vote

Developed an E-Voting website that allows users to vote via the internet using Blockchain technology. The user has to login using facial verification, which was made using Face-api.js, while Node.js, EJS and Ganache were used to create a backend that stores user votes.

01/2020 - 02/2020

Social Media Project

Developed a social media website using React.Js that allows users to post and follow other users. The backend was designed using Node.Js and Express.Js with MongoDB as the database.

08/2020 - 09/2020

ChatFest

I developed a chatting website that allows users to create and chat in their own separate chatrooms. The front-end for this project was designed using ReactJs, Materialize CSS, and MobX, while Google Firebase was used to create a backend that stores user's data.

Work experience

2021-07 - Now

Full stack developer

Antares Tech

- Developed full-stack web applications which allows real-time communication and recording storage.
- Designed and built features for web application using React.js and Material-UI.
- Liaised with back-end developers, front-end developers, quality assurance testers, and CTO as needed.
- Built microservices using Node.js, MongoDB and NATS.
